

# ASSISTED LIVING & HEALTHCARE

## NURSE CALL SYSTEMS

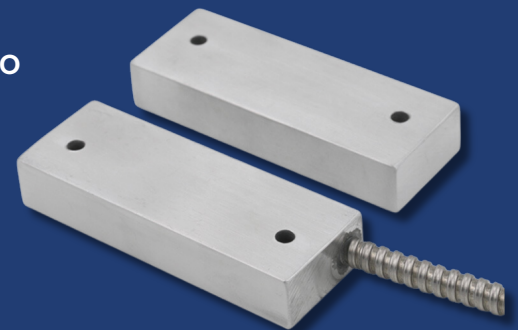

Our base nurse call systems are not dependent on Wi-Fi computer connectivity and work even when the power goes out to ensure care givers can always take care of their residents. They are easy to customize to any facility with a variety of sizes and call devices such as pull cords, pendants, push buttons, fall pads, etc. Our flexible designs mean you can add on features as the future demands. Pagers, iPhones, and other displays are easy to integrate. Our systems can also be connected to Wi-Fi enabling metrics and reports to be available from any browser.

## PERIMETER DOOR MONITORING

Detect residents at the perimeter with our heavy-duty door and gate position switches monitored by an LED annunciator. It's easy to see all of the doors and the sounder calls attention to problems immediately.

## WATER LEAK DETECTION

Water leaks are a common problem in care facilities. Our leak sensors can be integrated into all of our call systems.
